

Comparison of Civil Estimating Solutions

The SharpeSoft Estimator™ is a full-featured estimating solution for heavy/civil contractors, and also includes many features not found in other systems. Below is a feature comparison of the Estimator and two other estimating software products also designed for the civil contractor.

Also note that the SharpeSoft Estimator is available in only one *full* version, with *all* available features and functionality provided to all users. You should be aware that most competitive products have tiered versions for basic, intermediate, and full functionality. While the initial price may be less, if you do purchase one of their basic versions, you may have to pay thousands of dollars more to upgrade to their tier-2 or tier-3 versions to unlock features that are simply standard in the SharpeSoft Estimator. Before you purchase any system, be sure that all of the features that you need are included.
